EXPERIENCE

- **DataGenie** Remote
Founding Engineer, Data & AI December 2023 – Present
 - Work on DataGenie's agentic BI chat for business users, across the agent harness, guardrails, query planning, and the visualization layer that turns answers into shareable reports.
 - Design and maintain core microservices built from the ground up for metric computation, insight generation, pipeline orchestration, and LLM integration; implement analytics algorithms such as contribution analysis and Shapley value attribution for KPI root cause analysis.
 - Optimize production PySpark jobs processing millions of records daily, including running anomaly detection on aggregated data losslessly compressed to a third of its original size.
 - Work directly with customers to understand business pain points, translate them into product requirements, and drive adoption of the features we ship while maintaining customer relationships.
- **ZeroDown (YC W19)** Remote
Software Engineer Intern June 2022 – December 2022
 - Maintained existing ETL pipelines that enriched home listings with neighborhood data such as nearby shops, and built automated ETL pipelines to integrate new data sources.
 - Designed an automated incident routing system that analyzes error tracebacks to identify the responsible developer, reducing debugging time.

PROJECTS

- **IntersectX**: Built an LLM chat and investment research platform where founders pitch their companies and VCs research them; a central MCP orchestrator coordinates specialized agents (finance, market, team, risk) backed by vector search and live web research. (Demo | GitHub)
- **DoodleDraw**: Trained a CNN to recognize doodles in real time for a browser drawing game that scores players when their sketch matches the prompt. (GitHub)
- **CodeForHer**: Prototype chat and voice assistant for guided learning and safer commutes. (GitHub)

SKILLS

- **Languages & Frameworks**: Python, FastAPI, Flask, Django, Streamlit
- **AI Frameworks**: Agno, LangChain, FastMCP, TensorFlow
- **Data**: PySpark, Airflow, MongoDB, PostgreSQL
- **Cloud & DevOps**: Azure, GCP, Docker, Kubernetes

EDUCATION

- **PSG College of Technology** Coimbatore, India
Integrated M.Sc. Data Science; CGPA 8.67 June 2019 – April 2024
- **Adhyapana CBSE School** Madurai, India
Class XII (CBSE); Marks 93% 2018 – 2019

ACHIEVEMENTS

- **Code For Her**: Won first prize at Locus's Code For Her hackathon, 2025 (Article | LinkedIn).
- **IntersectX**: Prize winner at Agno's Global Agent Hackathon, 2025, among 60+ final submissions (Winners).
- **Open source**: Bunker, an attendance tracking app, is still used by some students at PSG (GitHub).
